

INTRODUCING JAMIS PRIME 7.0

Setting the New Standard for
User Experience in GovCon ERP

WORK SMARTER AND ACHIEVE MORE WITH PRIME

OUR GOAL IS TO FUTURE-PROOF YOUR BUSINESS

JAMIS Software Corporation is announcing the launch of JAMIS Prime Version 7.0, its most exciting release to date. The latest release of Prime brings significant advances across the platform to the overall user experience, and will delight customers with features that will help save time and increase performance. The key areas of focus in the Prime 7.0 release include:

1. Major Advances in BI & Analytics
2. Personalized Workspace Modern UI
3. Business Event Automation
4. Native Multi-Factor Authentication
5. Mobile Customization Framework

This new release further cements JAMIS' role as an industry disruptor as this new innovative technology will help customers navigate the challenging world of federal contracting. JAMIS Prime version 7.0 delivers exciting new functionality, and we're thrilled about what this major release holds for all customers.

DISCOVER THE POWER OF PRIME 7.0

”

No other ERP system out there has the built-in security, the flexibility to work the way you want to work, the ease-of-use, and the future-proof technology that you will never outgrow.

Jeffrey Noolas,
President & CEO, JAMIS

PRIME 7.0 FEATURE HIGHLIGHTS

Major Advances in Business Intelligence & Analytics

Powerful new business intelligence BI and analytics capabilities allow JAMIS clients to dynamically query, discover and communicate meaningful data throughout their work groups and organization in order to make better and more effective decisions.

New Prime 7.0 dashboards give you filter parameters to look at your performance data by time period, customer, contract, and a wide range of additional metrics to ensure the ultimate flexibility in capturing the data you need.

And the all new analytics capabilities give customers dynamic new data inquiry features such as pivot tables, side panel dynamic views of data, drag and drop filters, conditional formatting, and more these all new features bring the comforts and capabilities of best-of-breed tools like Microsoft Excel and Power BI directly into the Prime application, boosting the user experience to the next level.

Personalized Workspace Modern UI

JAMIS Prime's modern architecture delivers personalized user experiences tailored to each role. Prime 7.0's all new workspaces provide an intuitive and user friendly way to navigate within the application and improve productivity and efficiency.

With low code, no-code personalization this means that your business can adapt Prime to your business processes rather than the other way around. The workspaces modern UI is designed around role-based requirements and processes, to give your users their own customized view of the data and performance metrics they need to succeed.

Business Event Automation

JAMIS Prime 7.0 ERP can increase awareness of important business events by sending automated notifications based on data changes or calculated fields. Information automation is a convenient way to globally manage alerts, notifications and insight to various stakeholders to make informed decisions in real-time.

For Government Contractors, this can provide real competitive advantages by actively staying in the know with project performance. Being notified when contracts reach percent-of-funding thresholds or when new contracts are awarded can trigger notifications and automation that remove unnecessary barriers and save time and money.

Mobile Customization Framework

In today's "Anywhere Operations" environment with an increasingly dispersed workforce, JAMIS Prime 7.0 provides a portable means of monitoring the most important KPIs for Government Contractors with critical metrics displayed at-a-glance. With simple mobile customization capabilities, Prime makes it easy for each unique user to access the data they need, when they need it.

Native Multi-Factor Authentication

In an uncertain environment where government contractors' sensitive data is constantly at risk, JAMIS remains vigilant in providing the most secure solution on the market. JAMIS Prime 7.0 ERP brings "native" multi-factor authentication to its dynamic toolset, providing a huge competitive advantage to JAMIS' clients working on their CMMC certification.

About JAMIS Software:

JAMIS Software Corporation is the only U.S.-based private ERP solution provider exclusively focused on government contractors. For more than 30 years, JAMIS has helped improve clients' ability to track and manage government contracts while staying compliant with DCAA, FAR, NIST, and other industry requirements. The company's JAMIS Prime ERP enterprise-class software solution is designed to support government contractors every step of the way, from RFI, contract award, and staffing through accounting, project delivery, and reporting. Today, tech-savvy IT services, cybersecurity, engineering, and other professional services contractors count on the flexibility and security of JAMIS Prime ERP to reliably serve their federal customers.
